BLOCKIN'

SHOW

FOG CONTROL PROGRAM
www.salisburync.gov/utilities/fog

Grease washed down the drain from washing dishes after cooking can stick to the insides of pipes and block them.

“Uh oh! Looks like someone has a problem! They will have to call a plumber for help with this grease.”

Grease that blocks sewer pipes can cause wastewater to spill onto the ground and creates a bad smell.

Grease really likes to stick to the insides of the drainage pipes.

Grease also likes to stick to itself and keeps sticking until....

... it can completely block a pipe and cause backup.

- * **Pour cooled grease from a frying pan into an empty soup or vegetable can.**
- * **Wipe the frying pan with a paper towel before washing.**
- * **Put the can into the refrigerator or freezer and reuse it until it is full. Then, throw the can into the trash.**

Hey Kids! Help Greasy with

1. When you help Mom and Dad wash dishes after dinner, wipe all the dishes out with a paper towel and throw in the garbage.

2. Ask Mom and Dad to pour or scrape grease from pots and pans into a can. Store in the refrigerator. When the can is full and the grease is chilled solid, throw it in the garbage.

3. Remember, hot water does NOT dissolve grease, it just pushes grease down the drain where it quickly cools and sticks to the inside of the pipes.

4. Grease is not the only culprit! Fats and oils from other products such as milk, ice cream, butter and mayonnaise are also bad for your pipes.
